

ABSTRACT

The invention relates to an HF right-angle connector comprising a plug receiver (8), on which a keying (9, 10) for the plug to be received is disposed, and comprising a socket housing (1, 2), in which connecting means (3, 4, 7) are accommodated. According to the
5 invention it is possible to mount the plug receiver (8) in various positions onto the socket housing (1, 2) so that a lead-off of the coaxial cable (5) is possible in different directions.
